THE NATA SAFETY 1ST TRAINING CENTER

WELCOME TO A NEW WAY TO TRAIN!

The new NATA Safety 1st Training Center is here and introduces exciting new features, content, and flexibility to your training. Designed with NATA member input in mind, this redeveloped system seeks to fundamentally change the way we think about training. The NATA Safety 1st Training Center places the training focus squarely on employee development — instead of solely on compliance — helping you build and maintain a talented, knowledgeable, and experienced workforce.

FOCUSED ON EMPLOYEE DEVELOPMENT

Ratings

The NATA Safety 1st Training Center utilizes a ratings-based approach to training that removes the emphasis on achieving a single certificate and refocuses your team on the individual, functional areas of their jobs. Rather than completing many hours of training before receiving a single certification, trainees earn ratings along their learning path, as they complete courses and gain experience. Each rating a student earns corresponds to a specific function of their job. Over time as students acquire more ratings and experience, they can also advance in Certification level from Basic to Expert — this allows for an increased focus on employee competency and development rather than just compliance.

COMPREHENSIVE TRAINING AT A FIXED ANNUAL COST

Your team will access the NATA Safety 1st Training Center through an annual subscription that provides unlimited use of all content. Facing employee turnover issues? No problem, simply replace the outgoing employee with the new hire and immediately begin training with no additional cost.

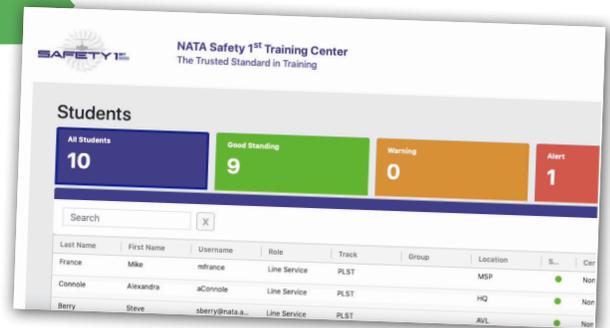

LESS TIME ON-LINE, MORE TIME ON THE LINE

We have taken the vast amount of NATA Safety 1st content and segmented it to focus on specific areas of training. This frees your team from spending hours at a time in front of the computer and allows your trainers to effectively leverage online learning and on-the-job-training. Combine that with the ratings-based approach, and your new hires will spend more time on the ramp.

TOOLS AND FEATURES THAT MEET YOUR NEEDS

The NATA Safety 1st Training Center has been rebuilt from the ground up with the needs of both the trainer and the students in mind. Featuring a new, cleaner administration interface, the Training Center provides the flexibility to customize the learning experience for each of your students, while providing powerful tools to keep track of all of your employees' training. New automated emails welcome users to the system or notify them of upcoming recurrent training, helping to reduce the workload on ground handling trainers. The Training Center is also designed to be dynamic in nature meaning it has the flexibility to incorporate new system features as the Training Center continues to grow. For example, the Student Desktop is a feature planned for release later this year that will provide students access to notification alerts on training status's, a company calendar, and a real-time industry news feed.

TRAINING YOU CAN CUSTOMIZE

The saying goes, “if you’ve seen one airport, well... you’ve seen one airport.” No two ground handling providers have the exact same training needs so we’ve developed the new Safety 1st Training Center to be fully customizable. Utilizing a new feature that we call “Course Tracks,” the Safety 1st Training Center allows organizations to create an unlimited number of customized approaches to training. For example, FBOs in southern Florida no longer have to train their staff on cold weather operations and ground handlers in Europe that do not offer refueling services can omit those courses from their custom track. NATA does provide a default Professional Line Service Track (PLST), but you always have the option to reorder, remove, or rearrange content.

THE NATA SAFETY 1ST TRAINING CENTER

REVITALIZED CONTENT

NATA Safety 1st training is the globally-trusted standard in ground handling safety and operational training. The new Safety 1st Training Center features revitalized content that incorporates the latest in instructional design techniques combined with all new videos, still photos, and graphics presented in a clean, modern format to create an engaging learning experience. The new Safety 1st content has also been globalized, making it even more useable regardless of where your organization is located.

YOUR ONE STOP FOR EMPLOYEE ON-BOARDING & DEVELOPMENT

The new Safety 1st Training Center has the ability to host your company's content alongside NATA's. Your organization can now leverage NATA's powerful learning management system to meet all of your employees' development and training needs.

REDUCE THE REDUNDANCY IN RECURRENT TRAINING

One of the most frequent comments that we hear from members and users is that long-time employees are tired of seeing the same content over and over again. The new Safety 1st Training Center employs a radical new approach to recurrent training with expiration dates applying only to specific courses rather than the entire suite of training. This means that for certain courses, such as *Introduction to Business and General Aviation*, there is no expiration date. Once that course has been completed, your students will never need to take it again. Other courses may have a 12, 24, 36 or even 48-month expiration time frame. But don't worry, the Training Center will manage all those dates for you. Additionally, the Training Center will support multiple versions of each course, meaning that even if you do have to view a course several times over the years, you will be able to see slightly different versions! Finally, in 2020, NATA will introduce support for in-person training (workshops, seminars, Safety 1st OnSITE, etc.) to count toward recurrency for certain online courses. This exciting new approach to recurrent training will keep your employees learning and advancing in their professional development for years to come!
